## Counter Terror News and Solutions

### Meet Raven, the Vapor - Wake K-9 at ASIS 2011 in booth 2074

X-Test™ is proud to announce the recent team-up with T&M Protection Resources. For over three decades, T&M Protection Resources has been providing a growing portfolio of seamlessly integrated security and investigative services, including state-of-the-art security technologies, to leading corporations, organizations and private clients.

Raven, a black lab, is the newest and most advance type of bomb-sniffing dog. A “vapor wake dog” can detect all of the known ingredients for making bombs. And animals like this one will soon be on NYC’s payroll and trying to keep us all safe.

X-Test™ in conjunction with T&M Protection services will be at ASIS in September demonstrating innovative and critical new kind of canine cop, the “vapor Wake” Detection dog. Most sniffer dogs work on stationary objects, but the vapor-wake detectors are bred and trained to recognize the odors of explosives in the air, distinguishing them from a soup of other smells. Auburn University’s Canine Research Institute (DCRI) developed these dogs specifically to follow a moving target, like a suicide bomber walking through an airline terminal.

### Explosives stolen from police training at Sky Harbor Airport (Canine)

Phoenix Police say a container with explosives inside was stolen during their routine training exercise at Sky Harbor International Airport.

#### Safer storage and transport

Storage and transport are often an issue when training the EDD on explosives odor. Explosives regulations are an encumbrance to accurate and realistic training. X-TEST Canine odor explosive (Non-detonatable) products benefit the requirements and safety precautions incumbent when utilizing live explosives, limit the release of live explosives and mitigate the potential safety hazards.

We invite all to visit our booth and see Raven and the capabilities of this incredible tool and the partnership for a more comprehensive security posture with T&M Protection Resources.

September 19-21, 2011, Orlando, FL. BOOTH 2074
